

In the Cordura Tech suit, the cordura fabric is used in the lower part of the suit for it's excellent durability and strength, while the polyester fabric is used in the upper body for it's increased flexibility and strength.

Two combination pockets are fitted as standard along with our integrated material socks and ankle gator system available in both male and female sizes see telescopic size charts alternatively you can use our custom fit service for bespoke suits.

Warm neck system, Camera pocket, Integrated fabric sock

This new innovative design drysuit uses a telescopic torso with a front entry zip and a second zip cover.

Thanks to this innovative design, the adjustable dump valve can be fitted in the optimum venting position of your choice. Another feature of this design is elimination of all seams around the neck seal area, helping to increase the reliability and life of the seal.

British made

All our suits are designed and manufactured in the UK by our experienced professionals.

Tens of thousands of suits, manufactured by ourselves, have been supplied to both the professional dive market and sporting divers alike.

Materials and colours

All materials used by Azdry have a butyl laminate which has resistance to oil, good flexibility with no cracking down to minus 40° C and has the best gas proofing abilities, better than any other polymer available. Our material supplier we have used for over 25 years, offer the best materials available today.

Upper Body - Polyester

Lower Body - Cordura

Black

Sleeve - Polyester

Black Pink Orange Red Blue Yellow

Seam Sealing System

Developed by ourselves in 1984, our seam sealing system is still the market leader today.

Firstly we use a twin-needle stitching technique followed by a primary sealing with a narrow neoprene tape, then a secondary sealing using a wider neoprene tape.

Guaranteeing many years of dry sealed seams!

Warm Neck

Warm neck is fitted when standard latex neck seal is fitted or optional silicone system.

The warm neck is fitted to protect the seal and add insulation by holding your hood in position.

The design of the warm neck consists of front and back panels using no Velcro making it extremely easy to use.

Valves

Apeks® and Si Tech® valves are available. Inlet valves are available in various hose fittings.

Apeks® cuff and auto-dump valves are both available. We recommend the old type adjustable dump valve for reliability and ease-of-use with a gloved hand. Si Tech® adjustable dump valve is also available.

Cordura Tech Exclusive

The exclusive range of suits are done in a contrasting stitch and logo in the top part of the suit.

The stitch is available in burgundy or pale blue and gives you the opportunity to personalise your suit by changing pocket options or other extras that do not come as standard.

Combi Pocket

Two combi pockets come as standard with this suit, these pockets are mounted on the side of the thigh as standard, but can be fitted to the front of the thigh if preferred.

The combi pocket system has a slate pocket mounted behind with approx 20 cm opening and retaining D-ring.

The combi pocket itself has a zip opening of approx 20 cm and a zip opening bellow system giving a depth of up to 8 cm maximum width 20 cm and maximum length 26 cm with a retaining D-ring fitted inside the pocket.

Sizes may vary slightly depending on size of suit
