

AZDRY

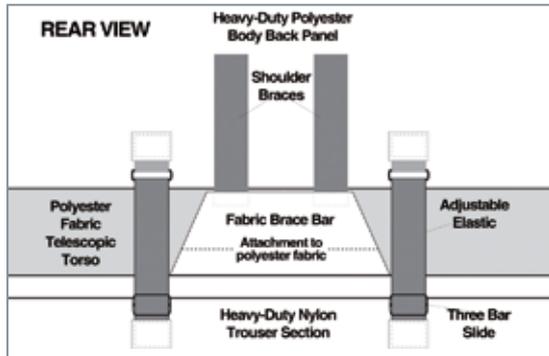

AZDRY RESCUE  
FRONT ENTRY TELESCOPIC LIGHTWEIGHT NYLON

**This lightweight front entry suit is a popular choice for Fire and Rescue, Helicopter Rescue and other water rescue agencies.**

The telescopic system allows freedom of movement plus the ability to fit a wide range of users.

**Featured with**  
Internal telescopic torso system, Integrated latex sock

The rear entry telescopic drysuit is a popular choice for those that do not have personal issue as the telescopic system will fit people that have a height variance of 15 cm.

The telescopic system allows much improved freedom of movement and with the rear zip allows easy access.

Because the suit is made as a top and bottom this allows you to change the fabric that is used in the suit for example, you could have high tenacity nylon in the lower part of the suit which is more prone to damage and a different materials in the upper part of the suit where the wearer has maximum freedom of movement.

### British made

All our suits have been developed for over 25 years working with rescue agencies and industrial users to give you what you require for your individual needs.

### Materials and colours

All materials used by Azdry have a butyl laminate which has resistance to oil, good flexibility with no cracking down to minus 40° C and has the best gas proofing abilities, better than any other polymer available.

Our material supplier we have used for over 25 years, offer the best materials available today.

#### Upper Body - Nylon

Yellow

#### Lower Body - Nylon

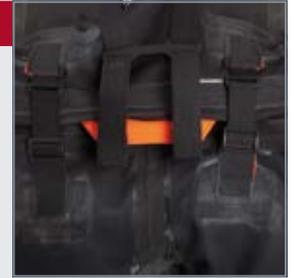

Black

Also available in other materials

### Integral Telescopic Torso System

The shoulder braces are attached to the middle of the rear of the suit, the internal brace utilises a three bar slide for length adjustment of the elastic for the tension required and the internal shoulder brace system is fully adjustable to personal preference and requirement.

### Front Velcro Tabs

Three Velcro tabs are used on the front part of the suit to hold it in position as opposed to using a crotch strap that could be a potential snag hazard.

### Integrated Latex Socks

Latex socks are available in up to four sizes, alternatively we also offer a fabric sock which is made to order in shoes sizes. Steel boots and neoprene boots also available.

### Seal options

The drysuit comes with latex seals fitted as standard but alternative seals are available which includes the latest Silicone seal system for both neck and wrist seals.

The wrist seals have an oval ring system which is the same circumference as a regular latex seal and the neck seal is fitted via a locking ring system.

Neoprene seals are also available where we use the finest neoprene from Yamamoto for its super stretch qualities.

### Reinforced Seat Pad

The reinforced seat pad is an extra layer of material which is sewn into existing seams, the material is usually the same material that the suit has been made from.
