

TECHNICAL RESCUE
NYLON / POLYESTER

The technical rescue suit is a telescopic front entry suit usually made in high tenacity nylon and heavy duty polyester, this suit is a popular choice by fire and rescue services for the guys that are trained in technical rescue.

The suit features an internal adjustment system with Velcro tabs to secure the front part of the suit thus eliminating the crotch strap which can be seen as a snag hazard.

Internal telescopic torso system, Neoprene seals, Purofort boot

The rear entry telescopic drysuit is a popular choice for those that do not have personal issue as the telescopic system will fit people that have a height variance of 15 cm.

The telescopic system allows much improved freedom of movement and with the rear zip allows easy access.

Because the suit is made as a top and bottom this allows you to change the fabric that is used in the suit for example, you could have high tenacity nylon in the lower part of the suit which is more prone to damage and a different materials in the upper part of the suit where the wearer has maximum freedom of movement.

British made

All our suits have been developed for over 25 years working with rescue agencies and industrial users to give you what you require for your individual needs.

Materials and colours

All materials used by Azdry have a butyl laminate which has resistance to oil, good flexibility with no cracking down to minus 40° C and has the best gas proofing abilities, better than any other polymer available.

Our material supplier we have used for over 25 years, offer the best materials available today.

Upper Body - Polyester

Orange Red Yellow

Lower Body - Nylon

Black

Integral Telescopic Torso System

The shoulder braces are attached to the middle of the rear of the suit, the internal brace utilises a three bar slide for length adjustment of the elastic for the tension required and the internal shoulder brace system is fully adjustable to personal preference and requirement.

Front Velcro Tabs

Three Velcro tabs are used on the front part of the suit to hold it in position as opposed to using a crotch strap that could be a potential snag hazard.

Purofort Boot

The Purofort boot is an insulated boot for temperatures down to minus 20° C and comes with steel toe cap and mid-sole and is only available in the colour yellow.

If preferred a fabric sock is available made from our heavy duty polyester fabric, available in shoe sizes.

Neoprene Seals/Reflective Bands

Neoprene seals are available as an optional extra, we use the finest neoprene from Yamamoto for its super stretch qualities, all sizes are available and we have 5 mm and 3.5 mm in stock.

Reflective 50 mm tapes are available to arms or legs or where preferred.

Bespoke Encapsulated Badges

We have encapsulated reflective badges manufactured for us, these are usually 11 cm by 4 cm in size.

Sizes can vary depending on your requirements, the text is in whichever colour you require on a reflective background. These badges are sewn in position and then sealed on the inside of the suit.
