

AZDRY

AZDRY STANDARD RESCUE
FRONT ENTRY LIGHTWEIGHT NYLON

This lightweight front entry suit is a popular choice for Fire and Rescue, Helicopter Rescue and other water rescue agencies.

This suit is also available in rear entry in a wide range of sizes.

Featured with
Lightweight front entry suit, Integrated latex sock

The suit is made from a lightweight nylon fabric in the top part, where the wearer has maximum freedom of movement. A high tenacity nylon used for the lower part of the suit which is more prone to damage.

This suit is also available in rear entry in a wide range of sizes.

British made

All our suits have been developed for over 25 years working with rescue agencies and industrial users to give you what you require for your individual needs.

Materials and colours

All materials used by Azdry have a butyl laminate which has resistance to oil, good flexibility with no cracking down to minus 40° C and has the best gas proofing abilities, better than any other polymer available.

Our material supplier we have used for over 25 years, offer the best materials available today.

Upper Body - Nylon

Yellow

Lower Body - Nylon

Black

Zip Options

This suit is available with medium duty 8 pitch zip made by BDM or we have the new Aqua Zip from YKK. This zip is made from plastic which is lighter in weight and more flexible than the traditional dry zip.

Integrated Latex Socks

Latex socks are available in up to four sizes, alternatively we also offer a fabric sock which is made to order in shoes sizes. Steel boots and neoprene boots also available.

Seal options

The drysuit comes with latex seals fitted as standard but alternative seals are available which includes the latest Silicone seal system for both neck and wrist seals.

The wrist seals have an oval ring system which is the same circumference as a regular latex seal and the neck seal is fitted via a locking ring system.

Neoprene seals are also available where we use the finest neoprene from Yamamoto for its super stretch qualities.

Reinforced Seat Pad

The reinforced seat pad is an extra layer of material which is sewn into existing seams, the material is usually the same material that the suit has been made from.

Badge Options

All badges are sewn onto the drysuit and then sealed on the inside of the suit.
